

Andika Rianto

Full-Stack & IoT Software Engineer

Bandung, Indonesia | Mobile: 083154577112 | Email: fundito079@gmail.com

SUMMARY

Industrial Informatics Engineering student specializing in Software Development and Industrial IoT, with experience in building end-to-end web applications, industrial management systems, and interactive e-commerce platforms. Focused on designing structured technological solutions that bridge client business needs with optimal user experience.

EXPERIENCE

PT BISA AI

Software Engineer Intern (August 2020 - March 2021)

- Developed dynamic web interfaces using Laravel and collaborated within a team to design a chat-based application named "Yuk Ngobrol".

Politeknik Manufaktur Bandung (Document Control System for Puskesmas)

Project Manager & Frontend Engineer (January 2025 - February 2025)

- Led the end-to-end development of a web-based Document Control System using Laravel and MySQL, successfully delivering the project on schedule.
- Designed an interactive, brand-aligned UI/UX and integrated backend APIs into the user interface.

Independent Professional / Freelance (Cooperative Management System)

Project Manager & Backend Engineer (December 2025 - Present)

- Spearheaded the development of a digital cooperative system using Laravel, Next.js, and PostgreSQL, leading from initial design to active implementation in two institutions.
- Built core APIs, designed complex database schemas, and conducted team-wide code reviews to minimize bugs prior to client deployment.

Politeknik Manufaktur Bandung (E-Commerce for Leather Bags)

Project Manager, 3D Modeler, & Frontend Engineer (February 2026 - Present)

- Built an interactive e-commerce platform for real-time leather bag customization using Next.js, Laravel, and PostgreSQL.
- Optimized 3D product models using Blender, converting them into lightweight 2D digital assets for visualization without compromising server performance.

EDUCATION

Politeknik Manufaktur Bandung (2023 - Present)

Industrial Informatics Engineering Technology - GPA: 3.72/4.00

SMK Negeri 2 Bandung (2019 - 2022)

Software Engineering

SKILLS

- Tools:** Visual Studio Code, Git, Docker, Figma, Blender, Unity, Odoo, Arduino IDE, Firebase, Microsoft Office, Trello.
- Hard Skills:** Programming (Python, PHP, C++), IoT & Embedded Systems, Mobile App Development (Flutter), Database (MySQL, MongoDB Atlas, PostgreSQL, Firebase), Web Development (HTML, CSS, Next.js, Laravel, Bootstrap).
- Soft Skills:** Project Management, Leadership, Professional Communication, Time Management, Adaptability, Problem Solving.
- Languages:** Indonesian (Native), English (Limited working proficiency).

ORGANIZATIONAL EXPERIENCE

Himpunan Mahasiswa Mekatronika Otomasi (HIMAMO)

Organization Timeliner Staff (January 2023 - Present)

- Managed and synchronized the organization's master schedule using Google Calendar to prevent conflicts across all major events.
- Monitored the preparation progress of divisions periodically to ensure work programs were executed according to deadlines.

Amateur Telecommunication Information Technology (ATI) Student Activity Unit

Game Developer Member & Instructor (January 2023 - Present)

- Coordinated training schedules and mentored 3+ new members in basic game development using Roblox Studio and Blender.
- Collaborated in designing and developing game prototypes, from core mechanics to visual integration.

PROJECTS

Tensen - Central Tendency Calculator Website | [GitHub](#)

- Developed a smart calculator web application featuring step-by-step solutions and graphical visualizations using Next.js and Python collaboratively.
- Designed a modern and user-friendly UI/UX to make statistical data easily understandable for users of all ages.

O-Man - Manufacturing Production Monitoring Website | [GitHub](#)

- Built an end-to-end manufacturing production management system in real-time using React and JavaScript.
- Implemented integrated monitoring features to directly process data from the ordering stage to the finished product.

Neuro - Autism Symptom Detection Expert System Website | [GitHub](#)

- Built an autism symptom detection expert system using Tailwind, Python, and Docker to ensure application stability across various environments.
- Accurately translated the medical parameters knowledge base into programming logic structures.

Smart Box Monitoring and Classification System based on IoT | [GitHub](#)

- Designed and built an automated conveyor prototype based on IoT using ESP8266 for real-time object detection and classification.
- Integrated the system with Firebase Realtime Database to synchronize production metric data and built an interactive monitoring dashboard for industrial logistics visibility.
- Implemented control logic in C++ firmware to synchronize infrared sensors and DC motor actuators to support industrial automation optimization.
